Description

Toolbar in the framework would be enhanced if the sort order were something that could be set by plugins, and if plugins could register more than just buttons as widgets for the toolbar. This goes beyond the capabilities of the current Action interface, so it'll require an alternative approach.

History

#1 - 09/02/2002 08:40 PM - Dan Higgins

The bug fix described here may not be needed as of Java 1.3. The Action class was changed in Java 1.3 as described in http://java.sun.com/j2se/1.3/docs/guide/swing/ActionsChanges.html.

It is now recommended that Components be added to Toolbars, menus, etc. and that the 'setAction' command then be used on the component to attach an Action. or as stated in the Java Tutorial " as of v 1.3, you can invoke setAction [(in the API reference documentation)] on all menu items and buttons. We no longer recommend using the tool bar and menu add(Action) methods."
http://java.sun.com/docs/books/tutorial/uiswing/misc/action.html

Buttons seem to be adequate for now. Marking as WONTFIX.
