

Morpho - Bug #257

package wizard error when data file selected

07/20/2001 05:34 PM - Matt Jones

Description

When stepping through the package wizard it prompts for a filename. If one actually provides a filename, an exception is generated and neither the "Next" nor "Previous" buttons work. Seems to be trying to treat the file as XML and running into problems parsing it. Should really handle data files separately from metadata files.

Towards that end, I suggest that FileSystemDataStore makes a separate subdir for data and metadata (which has the added benefit of avoiding a bunch of sax parse errors when searching). Maybe profiles/username/data and profiles/username/metadata?
