<b>Bugzilla-Id:</b>	2571		
<b>Description</b> It is quite annoying for me that copy/paste from another window puts the copied element onto the same absolute coordinate, most of the time outside the visible canvas of the edited window. Similarly, new ports also like to appear outside.  A relative position created from the original coordination and the current visible window would be more convenient.

One way to do this would be to translate the coordinates relative to the location of the mouse.

#2 - 06/26/2012 01:04 PM - Christopher Brooks

This is fixed.  
Now, when the user pastes, the paste occurs under the mouse.
