#### Description

Some names treated as synonyms in Weakley do not appear when searched in the SE Flora pages. For example, searching on *Cerastium holosteoides* var. *vulgare* gives no results, however it is displayed as a synonym when one searches on *Cerastium fontanum*. Similarly, a search on *Acer barbatum* gives no results although it's treated as a synonym of *A. floridanum* in Weakley, and Specify has numerous records for *A. barbatum*. The map of *A. floridanum* shows NCU specimens for *A. barbatum*, and *A. saccharum* ssp. *floridanum*. The list of specimens displays only a record for *A. floridanum*.

#### RKP:

This is probably best viewed as a design problem rather than an error. We currently return for images and specimens only those with an explicit name match. We should consider whether to display also concept matches, or perhaps the subset of concept matches represented by children. My recommendation is that for images and specimens we list two sets of results, the first being the name matches and the second being the additional concept matches.

Fixed. Check <http://152.2.14.231/website/NCFloraTest/> before classes on the herbarium server get updated.

##### #3 - 12/02/2006 11:53 AM - Robert Peet

We need to sort the records into two piles, the first being unambiguous records, and the second being the ambiguous ones, and these piles need to be appropriately labeled. The current mixing of records will be very confusing to the users.

##### #4 - 03/04/2007 08:10 AM - Robert Peet

This should be quick and easy

##### #5 - 03/08/2007 05:51 PM - xianhua liu

fixed.

The ambiguous specimens and images are shown in gray background.

##### #6 - 03/08/2007 06:05 PM - Robert Peet

fixed
