

Metacat - Bug #26

need to add NOT operator to pathquery.dtd

06/19/2000 04:19 PM - Matt Jones

Description			
The query description supported by pathquery.dtd does not currently support the "NOT" boolean operator, which should be provided as a choice in the "searchmode" attribute as "is-not". Also, the "matches-exactly" operator should be changed to "is". Finally, the QuerySpecification class needs to be updated to support these changes.

will do.

#2 - 07/17/2001 11:10 AM - Jivka Bojilova

DONE  
Included new terms in pathquery.dtd for searchmode:  
equals (former "matches-exactly")  
isnot-equal  
less-than  
greater-than  
less-than-equals  
greater-than-equals

Added support for them in QuerySpecification. Tested in Oracle.  
For = and != operators: ='1' and =1 (!='1' and !=1) work in the same way for numeric operands thus ='operand' is used only.  
For >, >=, <, <= operators check for numeric operand is added like:  
if (operand is Number)  
operator operand  
else //character operand  
operator 'operand'
