

InfoVeg - Bug #2622

Modify Specify to allow determination to concept

10/27/2006 04:02 PM - Michael Lee

Status:	New	Start date:	10/27/2006
Priority:	Normal	Due date:

Target version:	Unspecified	Spent time:	0.00 hour
Bugzilla-Id:	2622		

Description

We need to add some preliminary concept support to NCU Specify. The Kansas folks have agreed (in principle) to add a field or two as needed to Specify for us. I think we might place a in the Determination table immediately after TaxonNameID a new variable ReferenceWorkID with a foreign key to ReferenceWork (skipping the DeterminationReference table). If this field is blank on the Determination record flagged as current, or the reference is not mapped to Weakley, you can continue to map the specimen as a nominal. Does this make sense to you? Please look over the design.
