Bugzilla-Id:	2642		

Description

The Cover Data form is a bit tedious if you want to skip the module that you are in and get to the next. Perhaps Ctl-Tab would be nice to skip to the next, and SPACE should skip to the next column too (Ctl-Space to the next module).

For Stem Data, it would be nice to hold down Ctl-type a number-release ctl and zoom to the box that was of that minimum stem size and have it prefilled to 1, but selected so you could write something else there. Would help with species that have the odd stem here or there, but of some size.

Space bar should take to next column on stem data too, and comma or space should go to next record, particularly in big stems.

History

#1 - 11/03/2006 04:25 PM - Michael Lee

strata could also use some help in adding values when you press - in the base field, it should skip you to height so that you can enter 5-20 which is what is on the datasheet.

#2 - 11/03/2006 04:35 PM - Michael Lee

backspace on the cover data form should go back to the previous entry in the current entry is not filled in.

#3 - 11/28/2006 01:34 PM - Michael Lee

(In reply to comment [#2](#))

backspace on the cover data form should go back to the previous entry in the current entry is not filled in.

DONE! (version 204p_TN)

-----STATUS UPDATE-----

all comments and this bug in general are resolved EXCEPT for the plot-data stratum definitions and more QA probably by someone other than Michael, plus documentation.

#7 - 01/02/2007 04:09 PM - Michael Lee

Fixed the stratumPlot dash thing.

FUNCTIONALITY DONE FOR THIS BUG. version 2.0.4

still need QA and documentation

#8 - 01/02/2007 04:34 PM - Michael Lee

documentation added to stem and cover forms.

#9 - 01/05/2007 04:24 PM - Michael Lee

added to version 2.0.4 powerpoint as further documentation

#10 - 03/27/2013 02:20 PM - Redmine Admin

Original Bugzilla ID was 2642
