<b>Description</b>			
If you create a map of a taxon with IE 6.0 or 7.0, everything looks fine. However, if you create a map with either Netscape 8.1 or Firefox 1.0 the font for the species name is different and tiny.

Problem is still there.

When I create a map with IE8 I see the species name in the upper left in bold font that is the same size as the family and rank info. When I create that same map in FireFox the species name is no longer bold and the size is significantly smaller than the family and rank info.
