Description

SAS can process data (the old way) and we should take some new data, export it to old style CVS text files, run them through SAS, then see if SAS and Access come up with the same data at the end of the process.

This will require that Forbes run the data through SAS, Michael run the data through Access (noting carefully any fixes that were human fixes, like fixing logical errors).

Then Michael will compare the results to see if the data are the same (the focus here, is obviously on the tree and herb data).

History

#1 - 04/17/2007 05:01 PM - Michael Lee

Need to do this soon.

#2 - 09/01/2007 09:55 AM - Michael Lee

milestone v206 is in the past, so moving these to v2.3

#3 - 03/28/2008 12:13 PM - Michael Lee

The entry tool migration script has been very thoroughly QA'd. Not necessary to run against SAS.
