Target version:	DataManager 1.1.0	Spent time:	0.00 hour
Bugzilla-Id:	2673		

Description

Provide a means for the Calling Application to set an upper limit on the database size to prevent overloading the database. The table monitor component of the library must abide by the upper limit size constraint, and must include routines to drop tables when size constraints are met.

This task supports Use Case [#5](#) in the Database Manager Library UML documentation.
