Target version:	Unspecified	Spent time:	0.00 hour
Bugzilla-Id:	2698		
Description			
We should add a new tab to the dataset for "Traits". This tab should draw from a file that has the following structure:			
Weakley concept Trait name Trait value Source			
There needs to be a constrained list of accepted traits that forms the basis for ordering the list. Initially, let's use the following: Raunkaier lifeform, Peet Growthform1, Peet Growthform2, Lifespan, Nutrition. I can provide a dataset for this as soon as I get back to NC.			
We should also export trait data.			

History

#1 - 01/11/2007 04:37 PM - xianhua liu

new table "traits" has been created in the seflora database with data fields as following:

- 1. id: internal unique id (number)
- 2. concept_id: foreign kwy to weakley concepts (number)
- 3. raunkaier_lifeform: Raunkaier lifeform (text)
- 4. peet_growthform1: Peet Growthform1 (text)
- 5. peet_growthform2: Peet Growthform2 (text)
- 6. life_span: Lifespan (text)
- 7. nutrition: Nutrition (text)

Please sen me the traits dataset if it is ready, so I can start to import the data into the database and develop query functions and add web interface to show traits information.

Thanks,

Xianhua

Bob needs to compile trait data for implementation.
