

Metacat - Bug #27

DBReader doesn't recreate COMMENTS and PIs when reading a doc

06/19/2000 05:53 PM - Matt Jones

Description			
DBReader only looks at the ELEMENT, ATTRIBUTE, and TEXT nodes when reading a document from the database. It needs to also look at the COMMENT and PI nodes and serialize those as well as it is reading.			

History

#1 - 06/27/2000 07:40 PM - Matt Jones

Added two new classes (CommentNode and PINode) to allow DBReader to output COMMENTS and PIs when reading a document. Reading is now feature complete, in that all node types that can be written to the database are also reproduced when the document is read. Note there is a small discrepancy in white-space handling above the root node of the document. Newlines and spaces can be lost in this area above the root node, but are properly preserved inside of the document proper.
