

InfoVeg - Bug #2736

import from other db fails with ordering and when tables aren't there

01/19/2007 01:34 PM - Michael Lee

Status:	Resolved	Start date:	01/19/2007
Priority:	Normal	Due date:	
Assignee:	Michael Lee	% Done:	0%
Category:	EntryDB	Estimated time:	0.00 hour
Target version:	Unspecified	Spent time:	0.00 hour
Bugzilla-Id:	2736		

Description

The following code helps fix this:

```
If Not .BOF Then .MovePrevious
    Do Until .BOF Or .EOF
        'go from that db into this one

Dim strThisTableName As String
    strThisTableName = !TableName
    Debug.Print "adding to " & strThisTableName

If TblExistInDB(strThisTableName, strDBLoc) Then
    'table doesn't exist- is it critical?
    If !skippableTable Then
        Debug.Print "importFromOtherDB>> skipped skippable table: " & strThisTableName
        'do I need to repopulate it?
        Select Case strThisTableName
            Case "OneNullRec", "cvs_entry_options", "backupOptions"
                Dim rstAddOne As New ADODB.Recordset
                rstAddOne.Open strThisTableName, CurrentProject.Connection, adOpenForwardOnly, adL
ockOptimistic, adCmdTable
                rstAddOne.AddNew
                rstAddOne.Update
                rstAddOne.Close
            End Select 'repopulate with one rec
        Else
            'not skippable
            MsgBox "The database you selected is missing a required table: " & strThisTableName &
" Import failed. This database can be deleted.", vbCritical, CON_APP_TITLE

End If
    Else
        DoCmd.RunSQL "INSERT INTO [" & strThisTableName & "] SELECT * FROM [" & strThisTableName
& "] IN " & strDBLoc_SQL & ";"
    End If
```

but also need to add error trapping and list of skippable tables:
