

InfoVeg - Bug #2784

Community tab should be based on Weakley taxa and not nominals

02/27/2007 07:25 PM - Robert Peet

Status:	Closed	Start date:	02/27/2007
Priority:	Normal	Due date:

Target version:	Unspecified	Spent time:	0.00 hour
Bugzilla-Id:	2784		
Description			
In theory, the names in the CV database follow Weakley. Therefore, there is no reason to show communities in which the taxon occurs when names are interpreted as nominals. If you look for info on communities with <i>Quercus austrina</i> , then you should not pull up communities with <i>Quercus alba</i> .			

History

Should the parent concept and children concepts be included in the query result? For example, if querying by *Cleistes bifaria* in CVS, should *Cleistes divaricata* var. *bifaria* be included, and vice versa?
