

InfoVeg - Bug #2787

add entry_stems.isPlanted to interface?

03/02/2007 02:43 PM - Michael Lee

Description			
I added this field and need to make sure everything works nicely with it, specifically, the S module, detecting and combining duplicates, and that it gets propagated into the archive correctly.			

History

#1 - 03/02/2007 02:43 PM - Michael Lee

And that the fields in the database match each other correctly with Z_FieldDEsc

#2 - 03/02/2007 02:46 PM - Michael Lee

fixing the various cases in stem data also needs to take this into account. Also, make sure the unknownSp field is taken into account.

#3 - 03/02/2007 03:13 PM - Michael Lee

detecting and combining duplicates works, as does moving it over to the unfolded (treeDataBig/Sml).

#4 - 03/02/2007 03:19 PM - Michael Lee

Need to add this into the interface somehow, if we decide to regularly support this. Radio options between: all stems planted, all stems natural, and some stems planted (then selected which ones in the data lines).

#5 - 04/16/2007 01:22 PM - Michael Lee

This functionality may be better hidden from normal users and only messed with by dba.

#6 - 04/17/2007 05:04 PM - Michael Lee

also need to autopopulate isPlanted to T for individual stems.

#7 - 07/06/2007 11:07 AM - Michael Lee

Not needed anytime soon, if at all.

#8 - 03/20/2008 03:23 PM - Michael Lee

Sometimes users have planted stems that need to be switched to natural. Would be nice to have a button that did that, though probably the stem would stay in the planted form, which might be confusing. How to show the button is also unclear. Perhaps at the bottom of the form. "Change this stem to/from natural" If it was already natural, and the button was pressed, the stem would go back to planted. Some invisible (blank) text would be needed to flag the natural ones fairly clearly, always on.

(In reply to comment [#8](#))

Sometimes users have planted stems that need to be switched to natural. Would be nice to have a button that did that, though probably the stem would stay in the planted form, which might be confusing. How to show the button is also unclear. Perhaps at the bottom of the form. "Change this stem to/from natural" If it was already natural, and the button was pressed, the stem would go back to planted. Some invisible (blank) text would be needed to flag the natural ones fairly clearly, always on.

This exact process has been done, version: (v224_p0585_mid3)

And these stems marked planted are excluded from future printing and sampling, as well as excluded from statistics that are spit out of the entry tool.
