Bugzilla-Id:	2819			

Description

The menu command to build a Composite actor from a selected set of actors has been disabled in Kepler. [But an empty Composite actor exists in the actor tree and one can build composites by dragging it to the workspace.]

The menu command to build a composite from selected actors is quite useful and should be added back into Kepler. This will require correcting the Moml generated to fit Kepler requirements.

History

#1 - 09/05/2007 02:29 PM - Dan Higgins

Previously, this menu item did not work under Kepler. It now seems to work, so apparently some 'other fix' also fixed this problem! (Dan Higgins - Sept 2007)
