Kepler - Bug #2828

Actor names inconsistent

04/18/2007 11:33 AM - Kirsten Menger-Anderson

Status:	In Progress		**Start date:**	04/18/2007

Target version:	3.X.Y		**Spent time:**	0.00 hour
Bugzilla-Id:	2828			

Description

Actor names and parameter names are currently inconsistently formatted. They should all be camel cap/no space (e.g., DirectoryListing) With an initial cap for Actor names, and an initial lowercase for parameter names.

Is duplicate of Kepler - Bug #2438: Actors to be Renamed	**Resolved**	**05/16/2006**

History

#1 - 05/18/2007 11:49 AM - Chad Berkley

Changing all of the actor and parameter/port names within kepler is not feasible. Actors are created by many different people around the world and enforcing this would be more effort than it's worth, although I agree it's a good goal to have new actors follow a common naming scheme.

#2 - 05/19/2007 06:31 AM - Christopher Brooks

Hmm, I disagree with marking this as WONTFIX. The issue is that actor names should be camel cased and that Actors should have an initial capital letter and parameters should start with lower case. My opinion is that if an actor is shipped with Kepler, it should be made to follow the coding convention. Consistent names help users find things and create a uniform environment.

However, as I'm merely an observer here, I won't reopen this.

#3 - 05/21/2007 09:42 AM - Matt Jones

I agree -- these should indeed be fixed, and the effort to do so is well worth it. We also should be establishing standard for future contributions to the kepler core that are explicit about these requirements. I've reopened this bug and targeted at the 1.0.0 release.
