

Metacat - Bug #2832

Online Data Table display is awkward

Target version:	1.8	Spent time:	0.00 hour
Bugzilla-Id:	2832		

Description

Data Table and attribute information when displayed online has problems when there are greater than 10 columns and when greater than 400 characters with spaces are in the attribute description. Object Name, Text Format and Online Distribution Info are all centered in relation to the amount of columns. This makes this data hard to see because you have to scroll to the middle area that is measured by the amount of columns.

Data package cmccreedy.3 is a good example of these problems with the online display.

History

#1 - 11/02/2007 02:25 PM - Callie Bowdish

The EML stylesheets that Metacat uses have been updated to display the Data Tables vertically rather than horizontal. This helps the data to be displayed without needing to use the horizontal scroll. Tables that contain many attributes (columns) can be viewed and printed easier. This fixes some of the display problems with table attributes.
