Bugzilla-Id:	2889		

Description

ConfigXML.java has two constructors, but only one sets String fileName, the variable that points to Config.xml. This variable is used later in the SaveDOM method and must therefore be set if one wants to be able to write to the Config.xml file.

History

check on details of this.

Will it change other applications?

#2 - 12/13/2007 02:18 PM - Derik Barseghian

This bug was fixed 10.10.07, I forgot to mark it fixed.
