

Kepler - Bug #2896

StringConstant actor will not accept strings with '\$'

07/23/2007 03:13 PM - Dan Higgins

Description

Try entering a string like 'foo\$bar' in the StringConstant actor. It will give an error trying to evaluate 'bar' as a parameter. It looks like it is evaluating the string using Ptolemy's expression language.

I think this is because Kepler's StringActor is NOT the same as the Ptolemy StringActor. It has been modified to allow the string to be set to a filename and I think this causes an evaluation of the string. This may be useful for setting filenames, but it causes problems with some strings.

History

#1 - 07/30/2007 11:37 AM - Dan Higgins

Revised to use the standard 'StringConstant' from Ptolemy and documentation updated to note that '\$\$' can be used to insert a single dollar sign in the text.
