Kepler - Bug #2921

Way to temporarily comment out actors or connections

08/31/2007 02:49 PM - Bruce Char

Description

The development canvas should allow developers to temporarily "comment out" an actor or connection. As it has been explained to me, the alternatives are either deleting the actor (making it cumbersome to restore it if there's no copy of the actor handy), or to delete the connection to the actor and hoping that the director running the workflow doesn't get too confused. Deleting connections also requires the developer to remember what the connections were like which may be burdensome if multiple items are being removed.

I'll take this bug, which discusses that it would be nice to have
a way to temporarily disable an actor or connections.
