Description			
<p>Develop links to download the data. One link to download the entire data package (as a zip file) and download links for each file within the package. Develop java code to make client calls to MetacatClient. Develop new java code to download all files and package them into a zip file.</p> <p>Modify the related XSLT and CSS files to improve the resulting HTML aesthetics. Place the package download link at the top of metadata display.</p>
