History

#1 - 10/04/2007 03:49 PM - Chris Barteau

Modified MetaCatServlet.java "handleSetAccessAction" method to check to see if the document is a member of an EML package. If it is not, then don't enforce the rule that access must be applied via the EML metadata rather than this method. Also, modified ClientViewHelper.java "handlePackageUpload", to loop thru all of the data documents and apply the same access as the FGDC metadata document.
