Description

If no plots are selected, exporting EEP simple reports throws an error, because there is no data to transfer to Excel. Could be checked in a couple of ways:

1) if there are no plots, don't even try to write anything to Excel
2) if .EOF on a query, don't transfer info to spreadsheet.

The actual error occurs just after "Vigor by spp." worksheet is written.

History

#1 - 11/02/2007 10:33 AM - Michael Lee

fixed v211_p5_mid3.zip.

It warns you if there are no plots, and you can continue anyway. If nothing is there, then it no longer has odd error.
