Bugzilla-Id:	3001			

Description

If one uses the 'Browse' button to set EML File and Data File for the EML 2 Dataset actor, a file URL is created (i.e. "file://(file path). The actor, however, does not work with the "file://" included.

Need to convert from file URL to a local file string?

History

#1 - 11/13/2007 04:17 PM - Dan Higgins

Actually, the problem was on a Mac, a "C:/..." path from a PC became 'file:/' (single colon) rather than a triple colon "file:///" in the local data url. Fixed code to convert to triple colon.
