

Kepler - Bug #3030

Documentation says that kepler is version 1.0.0alpha8

12/14/2007 09:30 AM - Chad Berkley

Status:	Resolved	Start date:	12/14/2007
Priority:	Immediate	Due date:	
Assignee:	Matt Jones	% Done:	0%
Category:	documentation	Estimated time:	0.00 hour
Target version:	1.0.0rc1	Spent time:	0.00 hour
Bugzilla-Id:	3030		
Description			
If you go to the help/documentation menu and choose either "documentation for scientists" or "documentation for programmers" on the left side under the kepler menu, the version is listed as 1.0.0alpha8 in the programmer one and 1.0.0alpha9 for the scientists one. This should probably be removed or made so that it auto updates with the "version" ant tag.

#1 - 02/01/2008 02:13 AM - Matt Jones

I removed this from the documentation page. Now the welcome screen is the only place that displays the version number as far as I know. We've also consolidated the documentation page to a single page with pointers to the PDF files and demo workflows, so the other pages like intro for programmers should be removed as they are currently not referenced and are out of date. That kind of information is now included in the User Manual.

#2 - 02/01/2008 02:14 AM - Matt Jones

Fixed by removing this reference to the version number.
