Description

When I try and save a data package from Morpho using Remote Desktop I get an error. I am using a mac to remote desktop into a windows box. I get the following error when trying to save a data package to the network using Morpho.

warning from Morpo when trying to save a dp - Warning! No network connection available - can't log in

and Error! - Fatal error sending data to Metacat: No buffer space available (maximum connection reached?): JVM_Bind

History

Ben and I were both able to update a data package using Remote Desktop. I am not sure why I had the errors before. Maybe it was because java uses so much memory when creating a lot of columns. The data package that I updated and saved to the network had three data tables and one of them had over 50 columns.

I still wonder about the (maximum connection reached?) part of the error.
