

Kepler - Bug #3068

rmiregistry should be started programmatically

01/16/2008 02:51 PM - Chad Berkley

Status:	Resolved	Start date:	01/16/2008
Priority:	Immediate	Due date:	
Assignee:	jianwu jianwu	% Done:	0%
Category:	distributed execution	Estimated time:	0.00 hour
Target version:	master-slave-2.0.0	Spent time:	0.00 hour
Bugzilla-Id:	3068		
Description			
A user wanting to use the distributed system should not have to start the rmiregistry manually. kepler should start this for him/her when it starts up.			

History

#1 - 01/28/2010 09:51 AM - jianwu jianwu

Users may start Kepler GUI at slave side. They also may only need to start slaveController especially when they can only access slave remotely.

So rmiregistry should be started either by starting Kepler GUI or a separate slave controller start command line (similar to previous ant runSlaveController).

#2 - 03/16/2010 01:52 PM - jianwu jianwu

It is fixed at Kepler trunk version 23363. rmi registry will be done automatically when using startSlave or startSlaveAsyn commands or starting Kepler GUI with master-slave module.
