

Kepler - Bug #3099

GetDocumentationAction.java needs to be moved into pll source

01/23/2008 06:20 PM - ben leinfelder

Status:	Resolved	Start date:	01/23/2008
Priority:	Normal	Due date:	
Assignee:	Chad Berkley	% Done:	0%
Category:	documentation	Estimated time:	0.00 hour
Target version:	1.0.0rc1	Spent time:	0.00 hour
Bugzilla-Id:	3099		
Description			
Rather than maintain a copy of this class in the src/exp directory, it should be included in in the ptolemy project. AKA "folded into" the pll tree. The class has been appropriately parameterized to behave as it originally did unless there is a "_multipleDocumentationAllowed" configuration parameter found. This is a follow up to bug #3053

Blocks Kepler - Bug #3053: Multiple Documentation windows not possible		Resolved	01/08/2008

History

#1 - 01/24/2008 08:45 AM - ben leinfelder

Transferring to Chad since he has write access to the pll project and has also edited this file previously (v1.32 on 06/5/2007 was his last commit for it)

#2 - 01/24/2008 04:13 PM - Christopher Brooks

I'm closing this, as I've updated the Ptolemy II tree with the Kepler version of Top.

#3 - 01/24/2008 04:51 PM - ben leinfelder

This is actually a bug for GetDocumentationAction (not Top). Reopening this one since apparently you *can* have multiple documentation windows open in Ptolemy.
More investigation needed...

#4 - 01/24/2008 05:00 PM - ben leinfelder

Darn! it was moved to pll. Undo! closing this bug (again).
(sorry about all the bugzilla emails)

#5 - 01/24/2008 05:08 PM - Christopher Brooks

Sorry for the confusion on this.
I went ahead and moved the code into ptll.
Perhaps 3053 could be reopened at a lower priority?
I dunno. I'm done with this code for the time being,
so do as you see fit.

#6 - 02/08/2008 09:05 AM - ben leinfelder

included in RC1 - retarget

#7 - 03/27/2013 02:22 PM - Redmine Admin

Original Bugzilla ID was 3099
