

Monarch - Bug #311

feed data from metacat to QA engine

10/27/2001 11:59 PM - Matt Jones

Description

Current QA engine design demo requires data upload from a web form. Need to modify the input routines so that it can obtain data directly from metacat. This requires metacat to be able to export a data package in the zip format. So if dsparse is passed a metacat identifier, it should be able to get the data without further user intervention.

Also requires a metacat web interface change to be able to trigger a QA session from a particular data set. Probably a button or link that is placed in the metacat eml-dataset-display stylesheet that sends the package id to dsparse for analysis.

Eventually dsparse should be able to obtain data from morpho as well (and be started from morpho), but this can be a second step. This would be an extension of the existing form upload capability, and so most changes would probably involve changes to morpho rather than dsparse.

History

#1 - 01/13/2003 02:26 PM - Chad Berkley

this bug has been taken into consideration in the new design of monarch.

#2 - 03/27/2013 02:13 PM - Redmine Admin

Original Bugzilla ID was 311
