Kepler - Bug #3126

add R system installation to the Mac installer

02/04/2008 09:52 AM - Matt Jones

Description

The R system is installed under windows as an option, but not under MacOS X. We need to add this so that Mac users can benefit from the R actors out-of-the-box. Need to see whether IzPack can handle this directly as it can for the Windows R installer or not.

We should also try to get this to work with the NMI build.

I've got this mostly working now. Just adding some finishing touches.

#4 - 04/07/2008 11:36 AM - Chad Berkley

The installer can now include and launch the R installer. I tried figuring out a way to not have to launch the R installer but it looks like this is the only good way to do it since it has to install files into the Framework folder.

#5 - 04/07/2008 03:39 PM - Chad Berkley

This works on my computer, but for some reason not on other computers. not sure why. reopening the bug.

#6 - 04/09/2008 11:51 AM - Chad Berkley

This is now working on multiple computers. I'll send the installer out for others to test.
