

Kepler - Bug #3149

cannot add arbitrary jars when exporting archive

02/14/2008 11:31 AM - Dan Higgins

Description

The "Export Archive (kar)" popup menu asks if the class file of an actor should be included in the kar, but there is no way to add other classes/jars. ie jar libraries that may be needed by the actor. (One specific example - python actor needs the jython.jar to execute)

Need to add a dialog to let the user add arbitrary number of additional jars to a kar file.

History

#1 - 02/14/2008 02:12 PM - Chad Berkley

This should also be handled by the dependency listing in the actor metadata that we had planned for but never used or implemented. If an actor requires a jar, it should be added as a dependency in the actor metadata for that actor.

#2 - 04/02/2008 09:10 AM - Chad Berkley

postponing to 1.1.0 There are numerous items that need to be worked out with this bug. How the user interacts with the kar file system is something that needs to be thought out more carefully. Until then, we shouldn't fix this.

#3 - 04/03/2009 02:23 PM - Chad Berkley

It would be nice to get this into 2.0, but it may need to get pushed, depending on how much work we end up doing on the object manager and the kar file subsystem.
