<b>Bugzilla-Id:</b>	3151		

#### Description

Currently the datamanager distribution *un jars* all the supporting jars it uses and packages them with the datamanager classes as a single datamanager.jar file.

Only datamanager classes should be included in this jar. Gathering the necessary supporting jars should be the responsibility of the application making use of the datamanager api.

This should make it easier to include in metacat and kepler and prevents version clashes with supporting jars.

#### History

##### #1 - 02/15/2008 10:16 AM - ben leinfelder

Removed the "unjar" step when building the jar.

Also noticed that the old ecogrid stub jars were being used. Took this opportunity to update those to use ecogrid-1.0.0 (some refactoring in the code was needed too)
