

Kepler - Bug #3158

RNBToKepler actors need to timeout more quickly

02/22/2008 04:08 PM - Derik Barseghian

Status:	New	Start date:	02/22/2008
Priority:	Normal	Due date:

Target version:	3.X.Y	Spent time:	0.00 hour
Bugzilla-Id:	3158		
Description			
RNBToKepler actors need to timeout more quickly when an RBNB server cannot be reached. It currently takes too long for this to happen, and blocks Kepler in the process.			

History

#1 - 09/26/2008 12:28 PM - Derik Barseghian

Partially addressed by r7986, timeouts now 50% shorter (previously we were actually waiting through 2 OpenRBNBConnection timeouts).

OpenRBNBConnection can still take a patience-trying long time when pointed at a server that isn't running an rbnb server (e.g. ~1m 15s during some tests), but there is probably a good reason for this (dataturbines on flaky connections).
