

Metacat - Bug #3175

Add a thread to build xml_queryresult table when metacat startup

03/13/2008 03:46 PM - Jing Tao

Description

xml_queryresult table is a big addition to improve metacat query performance. Currently metacat will build records of xml_queryresult when a query first hit it. If we build them during the metacat startup, everytime metacat can get results from xml_queryresult rather than from xml_node table.

The returnfield sets will be the returnfields in metacat common query clients, e.g., morpho, kepler and all skins.
