I think the .sh files should stay under Windows as I use cygwin. I don't think the .bat files will work under cygwin.

#2 - 04/30/2008 10:57 AM - Chad Berkley

ok, I'll leave them. I've asked dan crawl if he's going to create a keplerexecute.bat file. right now, the only bat file is hsqlUtil.bat. kepler.exe starts kepler on windows.

#3 - 04/30/2008 11:08 AM - Daniel Crawl

It would be nice if kepler.exe were the only executable on Windows.

Christopher: does this work for you on cygwin?

#4 - 04/30/2008 11:15 AM - Christopher Brooks

The kepler.exe from the 4/29 kepler-1.0.0 windows installer works for me.

However, I really think that we need to include kepler.sh so that we provide an example and documentation on how to invoke Kepler.

I have no clue how kepler.exe was made or what it does. If, under windows, I want to invoke Kepler some other way and we only have kepler.exe, then I'm not sure how to do that. I think we should include kepler.sh under Windows for Cygwin users so that we show what Java command to run to invoke Kepler.

#5 - 04/30/2008 12:17 PM - Chad Berkley

kepler.sh will stay. closing this bug.

(v3 installer)
running ./kepler.sh in cygwin on win xp doesn't work for me.
Verified keplerexecute.sh is gone.
kepler-console.bat works from the command line.

#7 - 05/07/2008 03:00 PM - Jing Tao

kpeler.sh is in kepler-1.0.0 dir. But i don't have an cgwin, I didn't run it.

#8 - 05/07/2008 03:12 PM - Chad Berkley

we ended up creating a kepler-console.bat file which launches kepler with a console window. we also updated kepler.exe to not run a console window. the kepler.sh file should NOT be included with the windows installer. It was left in the v3 version by mistake.

#9 - 05/08/2008 10:26 AM - Chad Berkley

added a line to the install.xml and build.xml files to make sure the .sh
