Target version:	1.1	Spent time:	0.00 hour
Bugzilla-Id:	328		
Description			
the ldap authentication system crashes metacat if one of the referree servers is down and a referral is called. I do not know what the source of this error is or if it is a catchable exception. it needs to be looked into in more detail.			

History

#1 - 01/04/2002 10:09 AM - Chad Berkley

fixed this bug by changing the referral type to 'throw' and catching the referral exception then handling the NameingException that is thrown within the referral.
