Description

This feature does not work on the test server. On the production server it searches all of the knb data sets. I think this is confusing because the other searches only search for data that are associated with that skins organization. Also the NCEAS skin does not have a link to "View interactive Map"

Currently this View interactive map feature does not work on Safari and the new bata version of Firefox

History

It looks like this is not a problem because the drop down list is specific for the skins.

#2 - 06/04/2008 03:45 PM - Callie Bowdish

This could be improved by only querying the skins data. However the drop down list helps to only query the sites that the skin addresses.
