Description			
Selecting 'Data Parse Assessment' produces a dialog with a 'Launch Parser' link. This is awkward, and instead should actually launch the parser directly.

This won't happen for the meeting next week. It requires some additional integration with the parser app and morpho...Right now that page is acting as quite a substantial piece of glue between the two processes

Parser launch has been integrated with the menu system - there is no intermediate step. Parser is also being used to edit question metadata after initial parsing.
