

Metacat - Bug #3394

can't upload xml documents via multipart

06/12/2008 01:00 PM - Chad Berkley

Status:	Resolved	Start date:	06/12/2008

Target version:	1.8.1	Spent time:	0.00 hour
Bugzilla-Id:	3394		
Description			
You can only upload a binary file via the action=upload functionality. This should be changed to allow xml documents as well since you may want to use multipart encoding to upload an xml file from a web form instead of having to send the entire text of the document with the action=insert function.

I added functionality to metacat to allow this. the new action is called "insertmultipart". I haven't made it work with updates yet but that should be pretty straightforward.
