Description

If customize an actor document with "<anystring>"? It will throw exception when you save and reopen it. If you customize actor document with "<anystring>", it can not be saved.

The bug originated from one of our new kepler actor which has document with "<>" string. We have transform them to <> character when it is added. It works when it is saved for the first time. But throws exception when we reopen and save as an another file. It is because the file is saved as "<anystring>" for the first time but as "<anystring>" for the second time.

History

#1 - 09/19/2008 05:02 PM - jianwu jianwu

With update of ptolomy at ptolomy.vergil.basic.KeplerDocumentationAttribute. this bug has been fixed.
