Target version:	WhenWeHaveTime	Spent time:	0.00 hour
Bugzilla-Id:	3452		

Description

I think it would be really helpful to create a webpage that could be downloaded onto a mobile device (smart phone or PDA) and this could be consulted in the field. Especially for contractors, as I'd think the likelihood is they'd have such devices on them when sampling. Probably likely for Pulse, too.

All the glossary terms in the protocol would be desirable to include, and it would still be fairly small for a device, using javascript to show/hide what's of interest. Users would first select which list/field they are interested in, then be shown the field definition, optionally a list of values that are options, then optionally also a series of definitions for each value (or one at a time).

A first cut at this reference guide (not glossary) is here:

<http://cvs.bio.unc.edu/ref/>

#2 - 07/18/2008 01:46 PM - Michael Lee

This also makes me wonder about a PDA/web version of the protocol itself. The searching tool makes it really helpful. Probably more helpful than the paper version.
