Description

Having worked too hard recently to install Morpho on NCEAS Ubuntu machines, I am logging a formal request for someone to set up distribution of Morpho (and its supporting packages such as JRE) through the Synaptic Package Manager.

Just imagine how good that would be for all past, present, future Morpho users.
Esp considering NCEAS' strident advocacy of Open-source scientific software.

Catch my drift? :}

History

Now the IzPack installer will make it much easy.
