FIRST - Bug #3481

Need to be able to unselect the selected rectangle in Selector

Description

Right now, without accepting/rejecting changes, there's no way to unselect a rectangle. Clicking somewhere outside the selected rectangle should unselect the current rectangle when the rectangle is in selected mode. If the new click is inside another rectangle, that one should be selected.

History

This fix doesn't allow a new rectangle to be selected; it will always unselect the current rectangle if the mouse is clicked outside of the recognized areas when a previous rectangle has been selected. However, I think this is acceptable.
