

Metacat - Bug #3486

"View Metadata" link tries downloading object instead of displaying object metadata

09/16/2008 01:31 PM - Shaun Walbridge

Description

In the previous release of Metacat, the 'View Metadata' link leads to a separate page of Metadata about the particular file in question: <http://knb.ecoinformatics.org/knb/metacat?action=read&qformat=nceas&sessionid=96B37994CF258ED615FE3205D2C785FD&docid=bowdish.251.9>

In my local 1.9 installation, the links currently are set to the docid itself instead of the other entity objects:

<http://ebm.nceas.ucsb.edu/knb/metacat?action=read&qformat=nceas&docid=nceas.18.1>

Even after changing the docid to the correct value, the file is downloaded instead of displaying the file metadata:

<http://ebm.nceas.ucsb.edu/knb/metacat?action=read&qformat=nceas&sessionid=&docid=nceas.17.1&displaymodule=entity&entitytype=otherEntity&entityindex=1>

History

#1 - 09/17/2008 03:29 PM - ben leinfelder

testing this on my localhost works as it does in production - I get metadata page for the particular entity I have clicked. Can you allow public reading for your document on ebm.nceas.ucsb.edu?

#2 - 09/18/2008 11:17 AM - Michael Daigle

Shaun found the issue an fixed it by adding additional properties to skins properties.
