Bugzilla-Id:	35		

Description

After the initial connection is made to the SRB server using the SRB RMI server, subsequent attempts to connect are always authorized, even from different hosts. This problem persists until the RMI server is shut down and restarted. Although this may be a problem withthe srb, it is unlikely because it is such a basic part of srb operation that it would have been detected. However, it could be and so that possibility should be tested as well as checking the RMI server itself. This could be explored in conjunction with porting the RMI server to SRB 1.1.7.

History

#1 - 09/25/2000 03:39 PM - Dan Higgins

This big has been fixed, but needs to be revisited with changes added to srb 1.1.8

#2 - 04/05/2002 03:47 PM - Matt Jones

Consolidating products to those we actually are maintaining.
