Description

After adding a vectorized image to the image pane, it's not possible to go back and edit the rectangle associated with the image.

In order to facilitate this, most like ImagePane should be changed to descend from JList rather than JPanel. Otherwise it will be more difficult than it should be to identify which element is selected.

History

#1 - 02/24/2009 06:05 AM - Ryan McFall

Still important, but probably can't be done by target date for alpha 3

#2 - 05/12/2009 09:29 AM - Ryan McFall

This is now possible. ImagePane is still a JPanel, but has many JList like features. Moving to JList was explored, but due to some strange behavior (likely bugs) of custom cell renderers in JLists, ImagePane just implements some list like features itself.
