

## Kepler - Bug #3542

### Tree View menu is too wide when opened

10/21/2008 04:21 PM - Derik Barseghian

<b>Bugzilla-Id:</b>	3542		
<b>Description</b>			
<p>When you go to View =&gt; Tree View, the window opens as wide as the top level's _iconDescription, which is very long. Items in this menu should either wrap, or the window should just open at a more reasonable size, with scroll-bars displayed.</p> <p>Of Win/Mac/Linux, this is only happening to me under Mac, but others have reported it happens to them under Linux and Windows.</p>			

### History

#### #1 - 10/28/2008 05:31 PM - Aaron Aaron

A solution for this is to hard wire the width and height in the show() method of the TreeTableau Class.

```
//frame.pack();  
frame.setBounds(20,20,500,500);  
((TreeFrame) frame).centerOnScreen();
```

The setBounds x,y values of 20,20 become irrelevant with the call to centerOnScreen().

#### #2 - 04/03/2009 03:06 PM - Aaron Aaron

The Tree View menu item has been replaced with the Workflow Outline TabPane. To get to the Tree View you now select the outline tab and then select the "Show All" checkbox.
