

Kepler - Bug #3546

Automatically load trace for a completed run into the provenance browser

10/22/2008 10:40 AM - Timothy McPhillips

Status:	New	Start date:	10/22/2008

Bugzilla-Id:	3546		
Description At present, viewing the trace of a workflow run via the provenance browser (the one in the provenance-apps module) requires either running the provenance browser from the command line or navigating to the trace for the latest workflow run in the MyTraces subtree in the Traces panel of the Workspace pane in Kepler. I almost always want to see the trace immediately on running a workflow. Could we provide an option to load the trace of the current run automatically when it completes?

I suggest the provenance browser integrated with the Kepler GUI itself, possibly as a tabbed pane in the same space as the Kepler workflow canvas (see bug 3669).
