

Metacat - Bug #3554

Replication should write to disk

10/22/2008 03:27 PM - Michael Daigle

Target version:	1.9	Spent time:	0.00 hour
Bugzilla-Id:	3554		
Description			
Replication should do as the standard read and insert.			
From Jing:			
Hi, Mike:			
I think we decided metacat would read xml documents from file system in SB meeting and believe it does now in MetacatServlet class. However, I just went through the code to handle read action in MetacatReplication class(handleGetDocumentRequest method), it seems metacat still reads the xml documents from DB. It is reasonable to me that this read action will read xml documents from file system too.			
Line 1137 in MetacatReplication starts to handle getting documents.			
What do you think about this issue?			

History

#1 - 11/03/2008 01:38 PM - Michael Daigle

Moved the code for reading and writing documents to disk into DocumentImpl getXML() and write() methods respectively. In this way, any part of the code that reads or writes a doc will automatically do the disk part as well.
